

## Session 3 – Transcript (Graph & Hybrid RAG)

- Welcome back. Last sessions: Prompt Engineering, API Integration.
- Today: RAG – Retrieval-Augmented Generation.
- Vector RAG: chunks + embeddings + retrieval.
- Graph RAG: entity relationships matter (e.g., merchant → product → jurisdiction).
- Hybrid RAG: structured SQL + unstructured text combined.
- Demo: Upload KYC PDF, run Vector → Hybrid → Graph mode.
- Engagement: Ask attendees when Hybrid RAG would help in compliance/support.
- Wrap-up: Graph & Hybrid RAG = toolbox expansion beyond plain search.
